LAMBPLAN ASBVs

Lambplan breeding values provide some useful information in conjunction with a visual appraisal of the sheep. The market you are targeting will provide a good starting point for the ASBV's.

Weight (Pwwt) – Provides a breeding value for growth rate. A more positive value for Pwwt indicates a faster growing animal.

Fat (Pfat) – provides a breeding value for leanness. A more negative value indicates a leaner animal.

Muscle (Pemd) – provides a breeding value for muscling. A more positive value indicates an animal with higher muscle depth and potentially yield.

Both the **Carcase+** and **Trade \$** indices combine the above information into one value, indicating suitability for different markets.

Carcase+ is a desired gains index based on the weight, fat and muscle ASBV's. It has a relative emphasis of 65% growth, 30% muscle and 5% fat. Carcase+ rewards high growth and high muscle depth and selects rams more suitable for heavier carcass weights.

The **Trade\$** index targets 22 kg lamb production where earlier finishing lambs are required. It combines the ASBVs for growth, fat and muscle into a dollar index value expressed as dollars/ewe joined/year.

All lambplan data from August 15, 2016 run.
Further lambplan information available by request.
